## About Me

---

I am a full-stack software developer currently working as a site reliability engineer. My experience is varied since I have worked as a developer in enterprise settings, as an educator, an IT administrator, and also as a physics researcher. A tinkerer by nature, I find myself drowning in personal projects almost constantly! I have a particular passion for open source software and open initiatives, which is obvious if you look at my GitHub page ([github.com/mhanberry1](https://github.com/mhanberry1)). There, you can see my slurry of projects, including a popular nano-magnetic simulation software which I help maintain, NMAG. I prefer to work with GNU/Linux systems in my personal life, but I am a skilled system-level programmer and administrator for any operating system.
